Lab #8 Normalization 2

- 1) The functional dependencies for each table is the following: MovieSalesData relies on the MovieName to properly record and give back the data that said movie has, such as the sales of the movie, and the year it was released on. ActorMiscData relies on the name of the actor from ActorData, as does DirectorPersonalData and DirectorData, to relay the information of the actor/director.
- 2) A query to show all the directors that have worked with “Roger Moore” would go as follows.
 - a. Select Director

from MovieData

where Bond = “Roger Moore”;
